Bobo's Big Recycling Day

A little story about the whole Luma.Green team.
For readers aged 5 to 12, with a grown-up nearby.

Meet Bobo, Mira and the people who help material move.

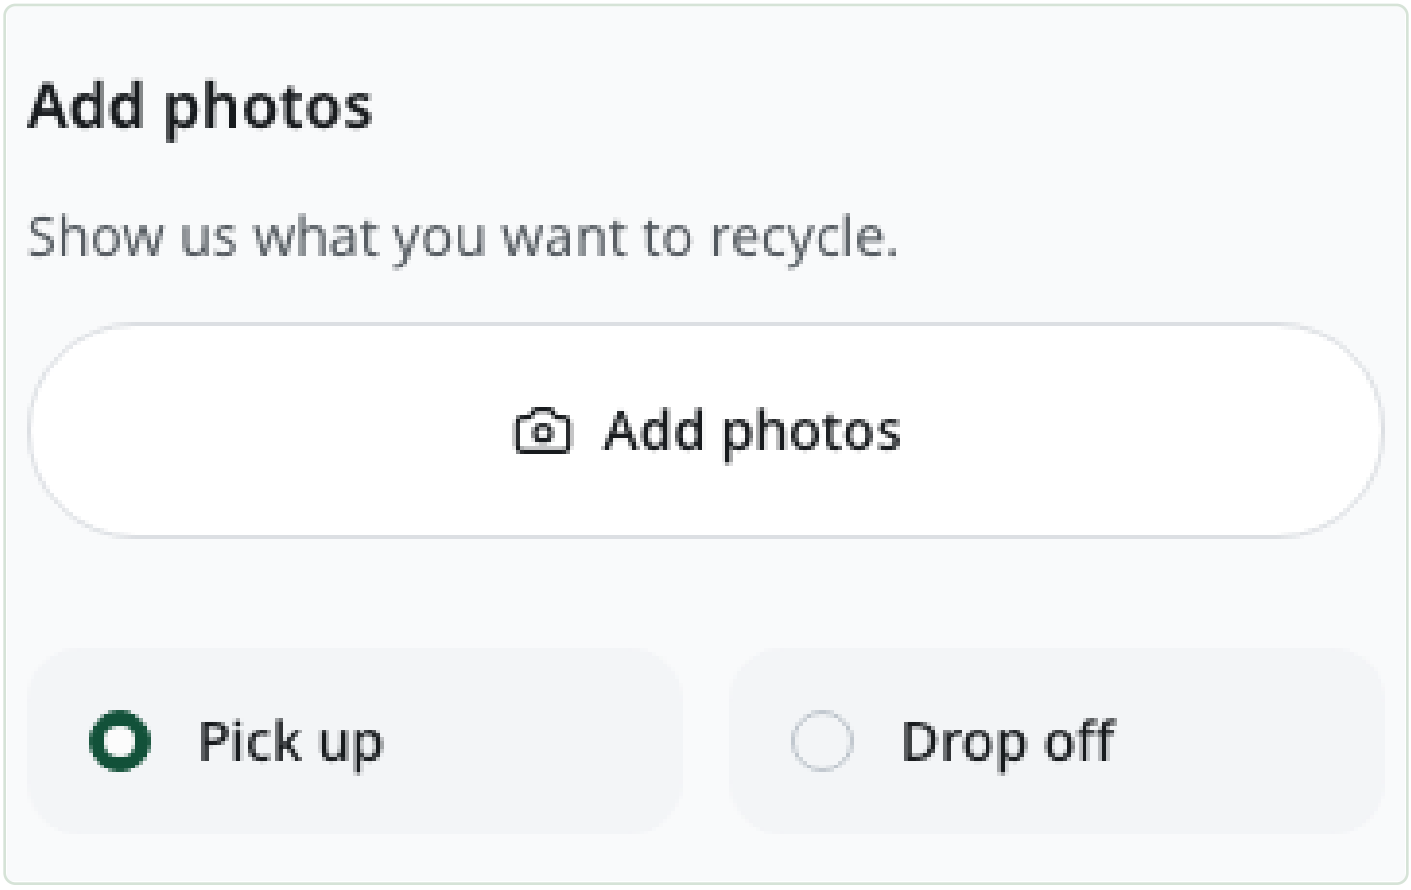

1. A bottle with a big idea

Bobo the bottle had a problem.
"I cannot fit in the toy box!"
Mira laughed. "You belong with our clean, dry things for recycling."
Her family had paper, bottles and boxes. They needed a safe way to pass them on.

2. A photo, a place, a time

Mira's grown-up opens Luma.Green. She adds photos, an address and a time. She chooses pickup or drop-off and verifies her phone.
"Do I have to guess the weight?" asks Mira.
"No. The shop measures it later."
A request waits until a shop accepts.

Example screen - made-up data. Detail: photos and collection choice.

3. The team says hello

Kavi runs the scrap shop. He accepts a collection. Sona, a Saathi, accepts her assigned job after checking its fixed fee.
She records the measured amount collected. The shop confirms what it received. Any difference needs a reason.
"My helmet is not a weighing bowl!" says Sona.
This handover does not pay anyone or add stock again.

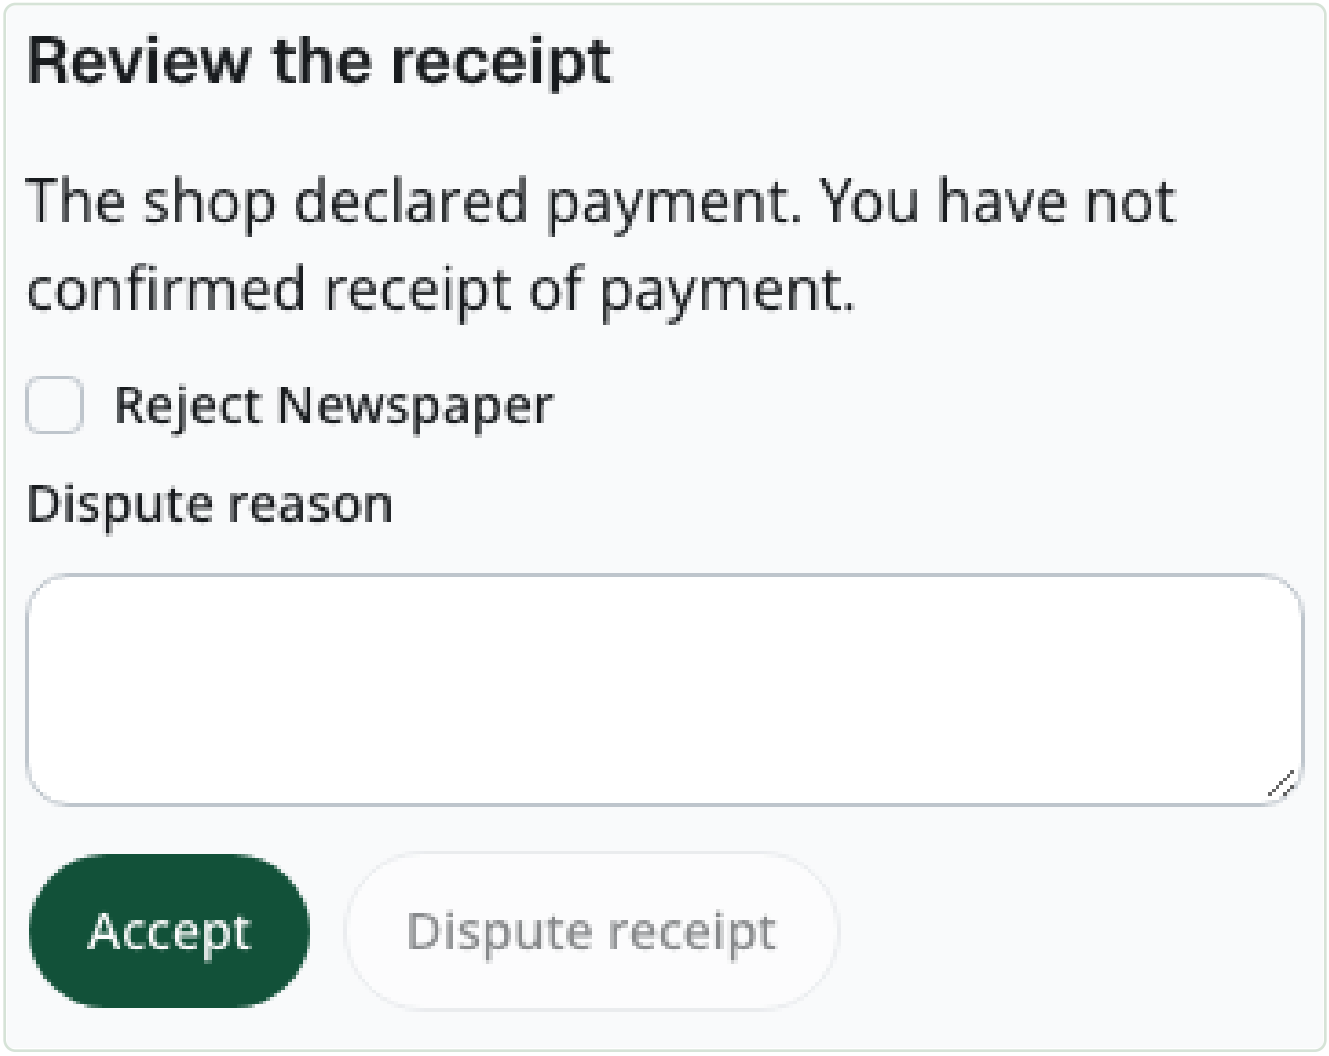

4. Let the scale speak

Kavi sorts the material and records its real weight and agreed price.
Bobo jumps on the scale. "Do my shoes count?"
"Step off, silly bottle!"
The receipt keeps each material, weight and amount.
Old records stay in the history when someone needs to make a correction.

5. Look before you agree

The grown-up checks the receipt. She can confirm it or report a wrong line. A dispute stays open for review. The shop pays the household directly. The grown-up then acknowledges that payment separately.
"A receipt is not a magic money button," says Bobo.

Example screen - made-up data. Detail: receipt review and payment status.

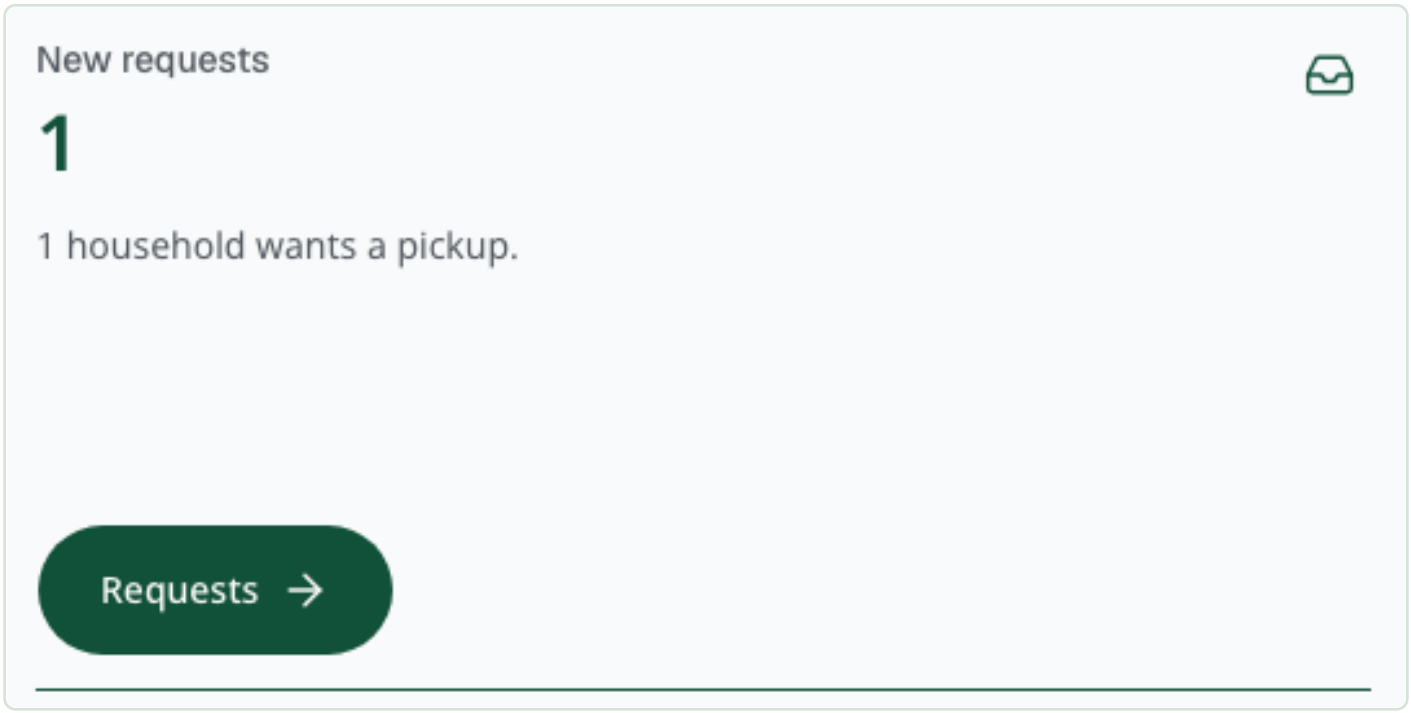

6. Every gram has a place

The shop records what it holds, buys and sells. A collection centre can also receive material. A yard, or preprocessor, sorts and groups it for the next business.
"Paper here. Bottles there. Sandwiches in my tummy!" says Bobo.
Nobody sells the same saved material twice.

7. A useful stock book

The team checks material, weight and recorded cost. Unknown costs stay unknown. The shop can save a daily stock review and choose a low-stock alert. Owners and admins manage access. Members do daily work. Viewers can read.
"Can everyone change everything?" asks Mira.
"No. Each person has the right keys."

Example screen - made-up data. Detail: the shop work queue.

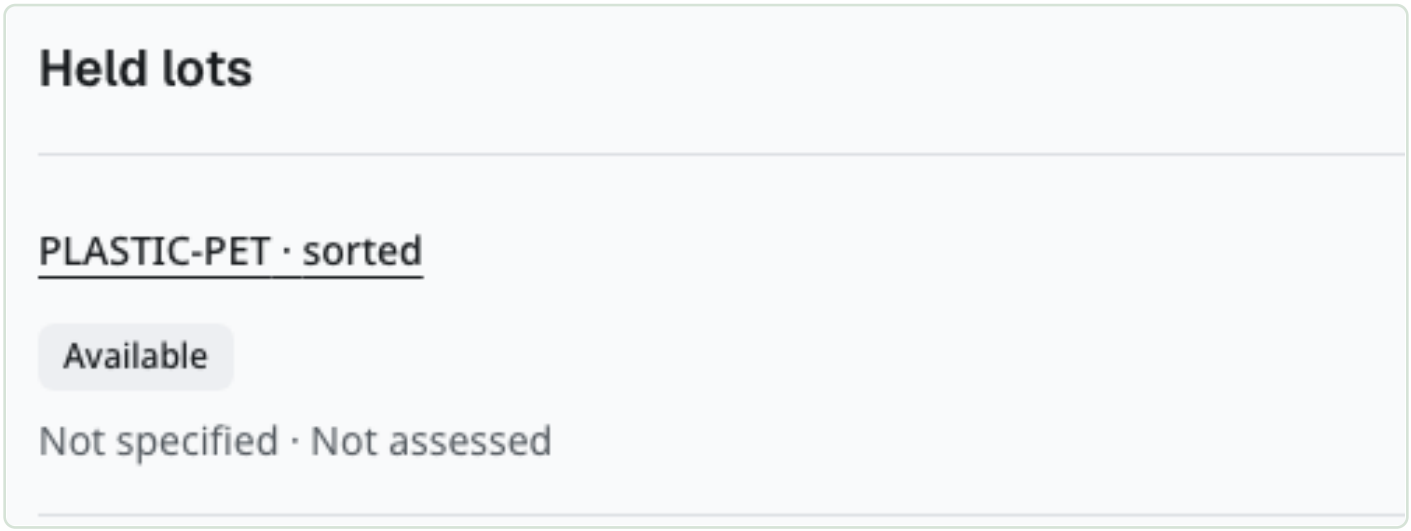

8. Old things, new possibilities

A processor records what goes in, what comes out and what is left over. A recycler makes usable material. A manufacturer can make a new product from suitable material.
"A bottle could help make a bag!" says Mira.
"Could it make lunch?" asks Bobo.
"Please stop eating the story."

9. Buyers and sellers agree

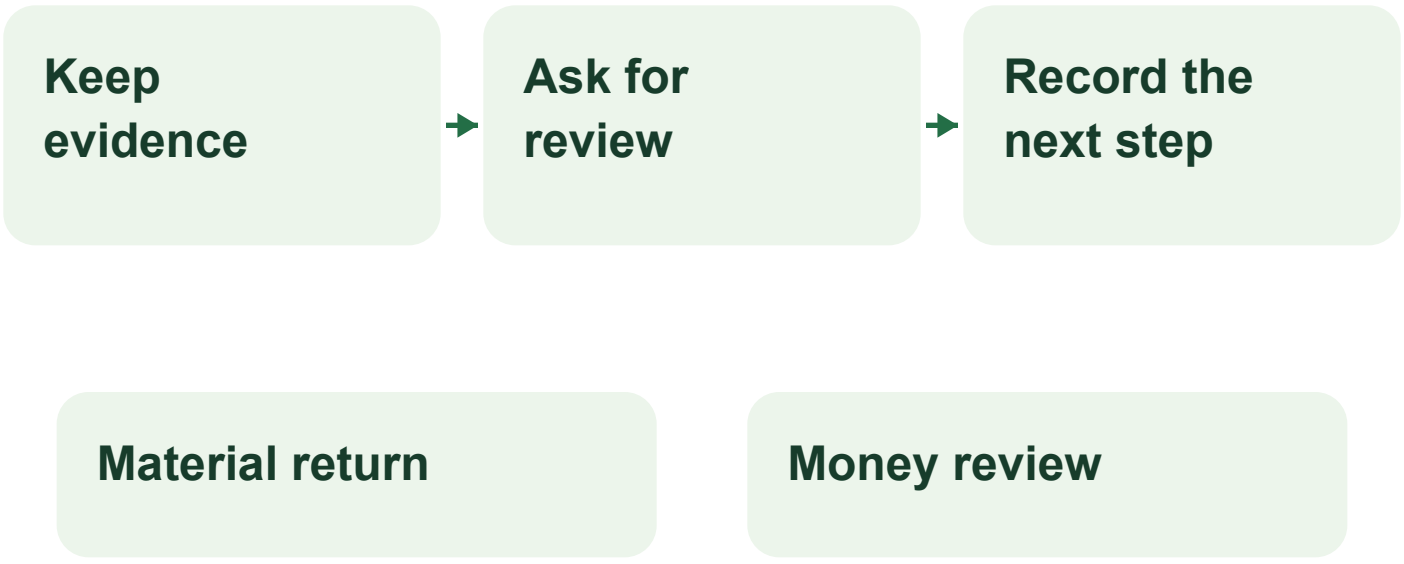

The buyer and seller agree on material, quality, weight, price and delivery. Transport costs have their own place. Business payment needs the enabled payment service and its checks. A missing service says it is unavailable. Paid collection, processing and treatment are separate services. They are not all material sales.
A record alone does not approve a sale.

Example screen - made-up data. Detail: an unassessed material record.

10. A problem is not the end

A wrong weight, failed test or missed visit needs a clear record. The team keeps the evidence and asks for help. A return needs approval and a safe destination. Sending material back and sorting out money are separate steps. "No disappearing problems!" says Bobo.

Two separate paths. Both need evidence.

11. A key for each door

Photos and documents stay private.
A verified adult can help with handover, but cannot approve receipts or payment.
People can end sharing or request account removal.
Unfinished duties must be resolved. Required records stay for review.
"Even Bobo needs the right key."

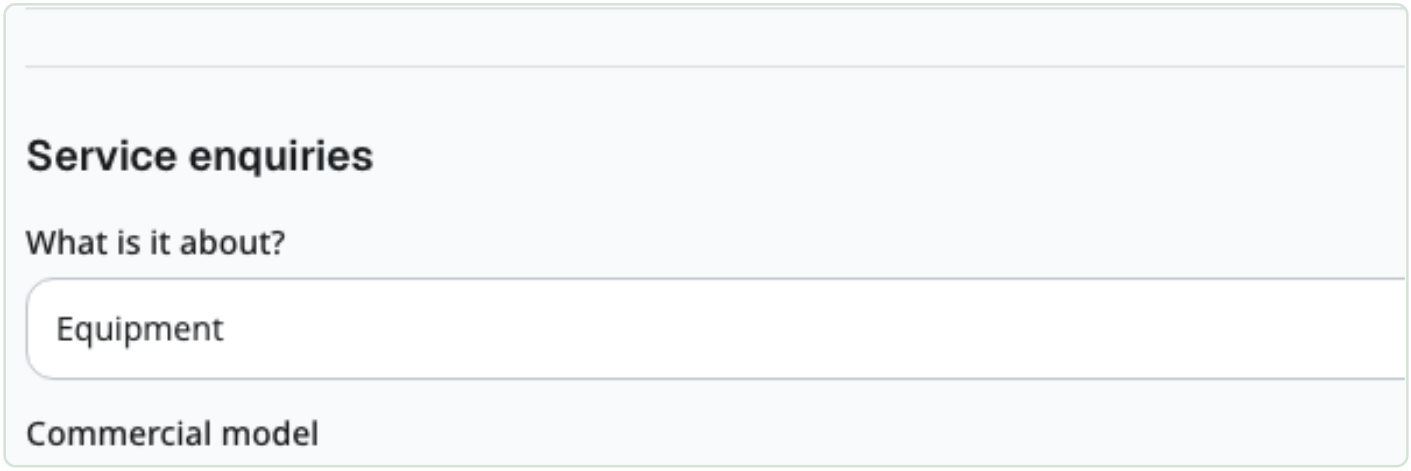

Owner
Checks receipt + payment

Invited adult helper
Helps with handover

Report reader
Sees only the shared report

12. More helpers, honest answers

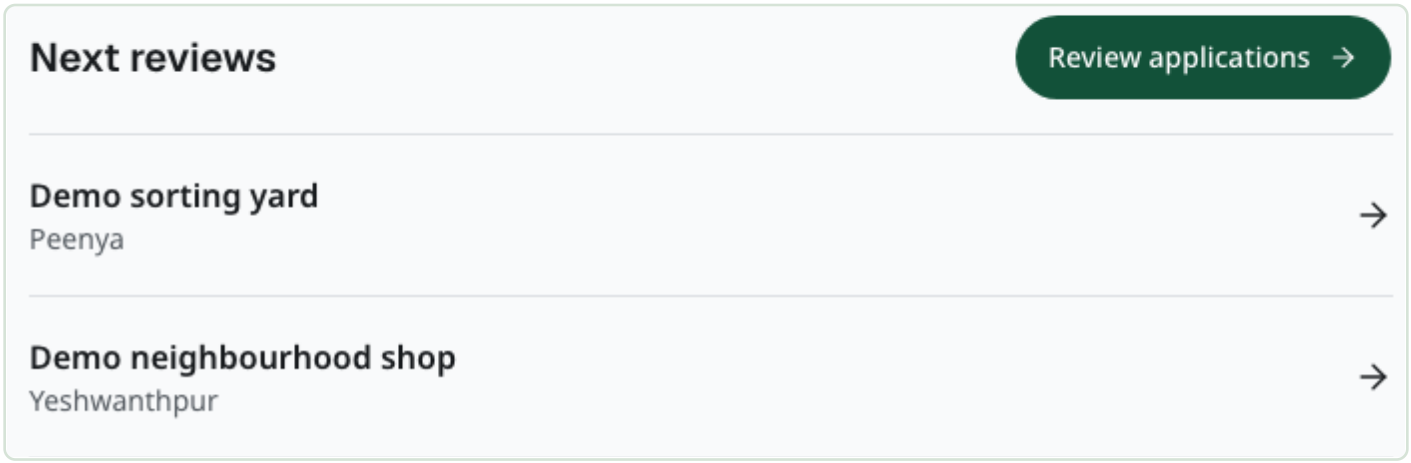

An apartment, office, local group or public partner may need a collection report. Other partners may help with equipment, transport, finance or welfare.
People can send a private enquiry and record a programme.
"A question is not a promise," says Bobo.
No automatic loan, prize, donation payment or official certificate appears.

Example screen - made-up data. Detail: a private service enquiry.

13. Asha keeps watch

Asha is the admin. Her sign-in needs extra protection. She reviews records, helps with problems and can offer a collection to another eligible shop. The shop still decides whether to accept.
Each change leaves a history.
"A trail of facts," says Asha.
"Better than a trail of banana peels!" says Bobo.

Example screen - made-up data. Detail: the admin review queue.

14. One connected journey

From a family's request to a new product, the team shares a chain of clear records. Some material takes fewer steps. Some needs a special permitted route.
"One more adventure?" asks Bobo.
"First, put your shoes away," says Mira.
The little bottle grins. Tomorrow has room for better habits.

A small note for grown-ups

The characters and artwork are fictional. The app pictures use actual Luma.Green components with made-up data in an isolated test. They do not prove a real account, sign-in, deployment or provider transaction.

Luma records household payments; it does not send them. Business checkout, messages, storage and other outside services depend on configuration and approval. An unavailable service must say so.

Processing records and reports are evidence, not automatically official certificates or carbon credits. Specialist material needs a verified permitted route. Expo mobile work is paused. This book covers the web platform.

Read this book together. Children must ask an adult before using the app or handling material. Keep unsafe or unknown waste out of ordinary dry recycling.
